## CUSTOMER REQUEST SUMMARY

Your request was:

- Product Code:  
E081
- Keyword list:  
electronic network network system ports control commands electronic devices storage retrieval control means flow control IED ports
- Text: *cl 1*  
A communications processor apparatus for integrating communication between a plurality of electronic devices having data communication capability, such as protective relays, meters, terminal devices and computers, present at a given location in a power system, such as a substation or connected remotely thereto, the apparatus comprising an electronic network system having a plurality of port positions to which electronic devices may be connected, including at least one port position to which an apparatus for entry of control commands may be connected and at least one port position through which data obtained from said electronic devices may be provided; means for storing and retrieving data obtained from the electronic devices; means for processing the data obtained from the electronic devices; and control means for controlling the flow of data and control commands within the apparatus and between the ports.

## E081 SUBJECT SEARCH LIST REPORT - 1994 to PRESENT DATA
